

| Section / No. | Evaluation Criteria                             | Max Marks | Excellent                                                                    | Good                                                     | Satisfactory                                                      | Poor                                                         |
|---------------|-------------------------------------------------|-----------|------------------------------------------------------------------------------|----------------------------------------------------------|-------------------------------------------------------------------|--------------------------------------------------------------|
| A             | HCI Principles and Guidelines                   | 70        |                                                                              |                                                          |                                                                   |                                                              |
| 1             | Usability and Ease of Use                       | 10        | 9–10: Intuitive, easy to learn and use.                                      | 7–8: Generally easy to use; minor usability issues.      | 4–6: Usable, but noticeable user difficulty.                      | 0–3: Difficult to understand or operate.                     |
| 2             | Consistency and Standards                       | 8         | 7–8: Consistent layouts, terminology, controls and interactions.             | 5–6: Mostly consistent; minor deviations.                | 3–4: Several inconsistencies in interface design.                 | 0–2: Major inconsistencies confuse users.                    |
| 3             | Visibility, Feedback and System Status          | 8         | 7–8: Clear, timely feedback for user actions and system status.              | 5–6: Feedback generally clear; minor omissions.          | 3–4: Feedback limited or sometimes unclear.                       | 0–2: Little or no meaningful feedback.                       |
| 4             | Error Prevention, Recovery and User Control     | 10        | 9–10: Prevents common errors; clear recovery options and user control.       | 7–8: Handles most errors; minor weaknesses.              | 4–6: Basic error handling; recovery can be difficult.             | 0–3: Poor error handling; users may get stuck or lose work.  |
| 5             | Layout, Navigation and Information Organisation | 10        | 9–10: Logical navigation, clear hierarchy and well-organised information.    | 7–8: Good organisation; minor navigation issues.         | 4–6: Some confusing navigation or information grouping.           | 0–3: Poor layout and confusing navigation.                   |
| 6             | Visual Design, Readability and Accessibility    | 8         | 7–8: Readable text, suitable contrast, clear hierarchy and inclusive design. | 5–6: Generally clear; minor visual/accessibility issues. | 3–4: Noticeable readability or accessibility problems.            | 0–2: Poor readability; limited accessibility considerations. |
| 7             | Efficiency and Interaction Design               | 8         | 7–8: Minimal unnecessary effort; appropriate, efficient interactions.        | 5–6: Tasks completed reasonably efficiently.             | 3–4: Unnecessary steps or awkward interactions affect efficiency. | 0–2: Inefficient or unnecessarily complex interactions.      |

|          |                                                   |           |                                                                                      |                                                                 |                                                               |                                                           |
|----------|---------------------------------------------------|-----------|--------------------------------------------------------------------------------------|-----------------------------------------------------------------|---------------------------------------------------------------|-----------------------------------------------------------|
|          | 8 User-Centred Design and Target-User Suitability | 8         | 7–8: Clearly addresses target users, tasks and needs.                                | 5–6: Mostly suitable; minor mismatches.                         | 3–4: Limited consideration of user needs.                     | 0–2: Poorly addresses intended users or tasks.            |
| <b>B</b> | <b>Project Completeness</b>                       | <b>20</b> |                                                                                      |                                                                 |                                                               |                                                           |
|          | 9 Completeness of Required Features               | 10        | 9–10: All/nearly all proposed core features implemented and functional.              | 7–8: Most core features implemented; minor features incomplete. | 4–6: Several features incomplete or partially functional.     | 0–3: Most core features missing or non-functional.        |
|          | 10 Functional Workflow and Integration            | 10        | 9–10: Main workflows work end-to-end; components properly integrated.                | 7–8: Main workflows function; minor integration issues.         | 4–6: Some workflows incomplete or need workarounds.           | 0–3: Major workflows broken or poorly integrated.         |
| <b>C</b> | <b>Demonstration and Presentation</b>             | <b>10</b> |                                                                                      |                                                                 |                                                               |                                                           |
|          | 11 Demonstration of the System                    | 6         | 5–6: Clearly demonstrates key features and realistic user tasks on a working system. | 4: Demonstrates most key features; minor omissions.             | 2–3: Incomplete or unclear demonstration.                     | 0–1: Very limited or no meaningful demonstration.         |
|          | 12 Explanation and Response to Questions          | 4         | 4: Clearly explains design decisions, HCI principles and answers accurately.         | 3: Good explanation; minor gaps.                                | 2: Basic explanation; limited justification of HCI decisions. | 0–1: Unclear or unable to justify major design decisions. |
